- Location: **Europe**

Abstract

The CellforCURE (C4C) consortium aims to advance the current good manufacturing practice (cGMP) production of therapeutic cell therapies. The consortium is led by Cellectis, a biotech focused on the development of adoptive immunotherapies, and CELLforCURE, the largest commercial industrial facility for the production of therapeutic cell therapies in Europe. The consortium also includes seven public-sector organizations and university medical centers, who collaborate with the private-sector companies.

Mission

C4C aims to advance the cGMP production of therapeutic cell therapies. The consortium is led by Cellectis, a biotech focused on the development of adoptive immunotherapies, and CELLforCURE, the largest commercial industrial facility for the production of therapeutic cell therapies in Europe. The consortium also includes seven public-sector organizations and university medical centers, who collaborate with the private-sector companies.

Structure & Governance

C4C is coordinated by CELLforCURE, a subsidiary of the leading French biopharmaceutical company, LFB Biotechnologies. It also involves the participation of two biotech companies (Celogos and CleanCells) and seven public-sector organizations and university medical centers (APHP, Biological Resource Center at Lyon University Medical Center, Bordeaux University Medical Center, CHU de Toulouse, French Blood Agency, Lille University Medical Center/University of Lille 2, and Nantes University Medical Center).

Financing

C4C was established with an €80 million investment from the consortium members and €30 million from the French government as part of the “Investing in the Future” solicitation. This solicitation aimed to stimulate industry-academic collaborations to advance the field of cell therapy research, development, and industrial production.

Impact/Accomplishment

The first five products are currently being developed, with a view to validating the facility dedicated to the routine production of clinical trial and therapeutic batches. This facility is located on the LFB Group’s site in Les Ulis, close to Paris.
