COPD Biomarker Qualification Consortium (CBQC)

Research Areas

- Biomarker Research
  Diagnostic
- Data-Sharing Enabler

At a Glance

- Status: Active Consortium
- Year Launched: 2011
- Initiating Organization: COPD Foundation
- Initiator Type: Nonprofit foundation
- Location: North America

Abstract

The COPD Biomarker Qualification Consortium (CBQC) pools data related to biomarkers from many clinical trials conducted by pharmaceutical companies, academia, and the National Heart, Lung, and Blood Institute to create a sufficiently large data set to allow for evidence that supports qualification by the U.S. Food and Drug Administration and the European Medicines Agency. CBQC is considering a range of biomarkers that measure quality of life, exercise capacity, specific measures of lung function (such as hyperinflation), and blood tests that report inflammation in chronic obstructive pulmonary disease (COPD).

Mission

CBQC’s mission is to qualify biomarkers for COPD to provide measures that could facilitate the development of new treatments.

Consortium History
2011: CBQC created as a result of COPD Biomarker Qualification Workshop.

Data Sharing

The results of the biomarker qualification will be made public; however, the database will not be made public to protect patient information. The database will be available to regulatory authorities.
