At a Glance

- Status: Completed Consortium
- Year Launched: 2002
- Initiating Organization: European Commission Sixth Framework Programme (FP6)
- Initiator Type: Government
- Rare disease
- Location: Europe

Abstract

FP6 Rare Disease Projects aim to develop a database of rare diseases, which includes: disease name, year of database entry, and description—ultimately working toward furthering research that could potentially aid in the treatment of documented diseases.

Mission

The consortium database acts as a resource for collaboration on research that can affect the listed diseases. By compiling this database, information on rare diseases that may be difficult to come by or find are made easily accessible. Researchers searching for current or formed data on these rare diseases are able to use the list for networking capabilities.
Consortium History

As this consortium is a compiled database, each link within the system has its own history.

Structure & Governance

FP6 (Sixth Framework Programme) Rare Disease Project is commissioned by CORDIS (Community Research and Development Information Service), which is a program of the European Commission and therefore the European Union.

Financing

Financed by the European Union FP6 Programme.
