## Research Areas

### Tool Development

Innovation

## At a Glance

- Status: **Completed Consortium**
- Year Launched: **2010**
- Initiating Organization: **European Comission Seventh Framework Programme (FP7)**
- Initiator Type: **Government**
- Location: **Europe**

## Abstract

Health-TIES aims to accelerate the healthcare technology innovation cycle. The clusters in the partner regions combine clinical science with engineering and computer science, businesses and industries, regional authorities, and well-established bioscience parks. To map what is needed to accelerate the transfer of idea to product — or science to market — the partners will analyze regional research and development (R&D) needs, capacities, and policies of the participating clusters. The results of these analyses will be implemented in the practices of the participating clusters.

## Mission

Common goals: The impact of innovation and research and technological development (RTD) will be maximized for the benefit of healthcare. The common goals of the Health-TIES regions are as follows:

## Consortium History

Oct. 1, 2010: Consortium started

Sept. 9, 2013: Consortium ended

---

## Financing

Total Cost: 241,348,492 EUR

The European Union (EU) contribution, via the Seventh Framework Program (FP7), is €2 million.

---

## Impact/Accomplishment

The virtual reference region (VRR) is a tool developed by Health-TIES as part of its EU FP7 Regions of Knowledge project. To this purpose a new model was developed that would provide a benchmark of and insights into its innovative innovation systems.
