Research Areas

- Tool Development
- Regulatory
- Product Development

At a Glance

- Status: Active Consortium
- Year Launched: 2011
- Initiating Organization: IQ
- Initiator Type: Industry
- Location: International

Abstract

The International Consortium for Innovation and Quality in Pharmaceutical Development (IQ) is a technically focused organization of pharmaceutical and biotechnology companies with a mission of advancing science-based and scientifically driven standards and regulations for pharmaceutical and biotechnology products worldwide.

Mission

IQ’s vision is to be the leading science-based organization advancing innovative solutions to biomedical problems and enabling pharmaceutical companies to bring quality medicines to patients.

As a technically focused organization of pharmaceutical and biotechnology companies, IQ advances science and technology to augment the capability of member companies to bring transformational solutions that benefit patients, regulators, and the broader research and development community.

IQ provides a sustained forum for the exchange of ideas within and across technical disciplines in these industries. It leads initiatives in the areas of chemistry, manufacturing, and control; preclinical
safety; drug metabolism; clinical pharmacology; quality; and the reduction, refinement, and replacement of animal testing. As part of these initiatives, which are managed by leadership groups and working groups, members lead and participate in collaborative research, industry surveys, and benchmarking exercises.

IQ partners with governmental bodies, other trade groups, and academic researchers. Through publications, scientific conferences, workshops, and roundtables, it shares the results of its work and facilitates constructive scientific exchange.

To accomplish its mission, IQ has developed a series of strategic objectives. Its strategic objectives for 2015-2017 are as follows:
