Abstract

Mission

Scenarios and structures that help to run more clinical trials and to bridge the gap between treatment given to patients today and research to find better treatment for patients is of utmost importance. In consequence, the p-medicine project proposes to create an infrastructure that will facilitate the development from current medical practice to personalized medicine. The main drivers for such an infrastructure are clinicians as they have direct contact with the patients and as they are responsible to share data for exploitation.

To succeed in achieving the goal of personalized medicine, p-medicine addresses the following objectives:

Sponsors & Partners

The European Integrated Project p-medicine is supported through Coordination Theme 3 (Information and Communication Technologies) of the European Community's 7th Framework Programme, Grant agreement number 270089.
