Abstract

PanCare Childhood and Adolescent Cancer Survivor Care and Follow-Up Studies is a consortium of 16 European institutions, funded by the FP7 (7th Framework Programme of the European Commission). PanCareSurFup partners carry out research studies into late effects of treatment for cancer, develop evidence-based guidelines for long-term care of childhood cancer survivors, disseminate the results, and provide training and workshops for stakeholders.

Mission

PanCareSurFup is concerned with the long-term complications associated with cancer survival. They carry out a series of epidemiologic studies, engaging sixteen European networks to follow roughly 80,000 survivors of childhood and adolescent cancer. PanCareSurFup's studies are intended to lead to increased cooperation between treatment and advocacy groups, reduce disparities in survival, and improve outcomes for children and adolescents diagnosed with cancer in Europe. PanCareSurFup will

investigate the incidence of heart problems and the emergence of secondary tumours of both adult type and sarcomas following treatment of childhood cancer. The collected information will be used for developing risk estimates of these morbidities as well as of late mortality.

Consortium History

The PanCareSurFup project developed work packages that were useful in providing updates on progress and timelines.

Financing

Funded by the 7th Framework Programme of the EC

Patent Engagement

Sixteen European networks and institutions will follow about 80,000 survivors of childhood and adolescent cancer, making PanCareSurFup the largest study of its kind to date.
