Abstract

The Pharmaceutical Supply Chain Initiative (PSCI) is a group of pharmaceutical and healthcare companies who share a vision of better, social, environmental, and economic outcomes in the communities where people buy. They believe that collectively PSCI members can share knowledge and expertise across our industry to drive complex, global change more effectively than any one organization alone. They have joined forces to promote responsible supply chain management and better business conditions across the industry.

Mission

The vision is to establish and promote responsible practices that will continuously improve social, health, safety, and environmental sustainable outcomes for supply chains. This includes:

- Fair and safe work conditions and practices
- Responsible business practices
- Environmental sustainability and efficient use of resources

The mission is to provide members with a forum to establish industry principles that guide ethics, labor, health & safety, environmental sustainability, and management systems practices to support continuous improvement of suppliers' capabilities.

The purpose of the initiative is to bring together the pharmaceutical industry to formalize, implement, and champion responsible supply chain practices.

Consortium History

Structure & Governance

The consortium has twenty-four member companies and is governed by an elected Board of Directors, which is the primary decision making body. The Board establishes working committees and appoints their leads. The Board is elected by the member companies, who are also invited to participate in the working committees. Day-to-day, the PSCI is supported by a secretariat, which assists the Board and working committees to achieve their objectives.
