- Initiating Organization: **International Enterprise, Singapore**
- Initiator Type: **Government**
- Location: **Asia**

Abstract

Mission

The Singapore Biomedical R&D Consortium provides standalone services based on client needs. Contract research organizations and research institutes in the island state have the technical expertise and competencies to address the needs of global biomedical companies.

The consortium aggregates key capabilities of the companies along the biomedical research and development value chain to provide a one-stop solution for global players. This equips them with the competitive edge to gain a foothold overseas.

Consortium History

June 2011: Consortium announced.
