Stamford Therapeutics Consortium (STC) is a privately owned and operated clinical research site specializing in phase II, III, and IV clinical trials for the pharmaceutical and biotechnology industries. STC has a strong working relationship with a cardiology group, a large multispecialty medical practice, and a team of physicians who serve as sub-investigators for many of its clinical trials. STC maintains a significant presence in research for the treatment of osteoarthritis and rheumatoid arthritis, while continuing to expand its research into new therapeutic areas. Year after year STC’s list of specialties grows to accommodate a growing demand and new innovations in healthcare. With over 15 years of clinical trials operations, STC has conducted more than 350 national and multi-national clinical trials.

The company’s sole mission is to conduct the highest quality clinical trials so that new, safe, and effective medications can be developed, researched, and approved for a variety of indications and diseases.
Consortium History

The site was launched in 1994 and has contributed to clinical trials research ever since.

Structure & Governance

The consortium is governed by their president, medical director, founder, and clinical research coordinators.

Patent Engagement

STC actively recruits patients from all over Fairfield County, CT and Westchester County, NY. The facility has a spacious patient waiting area, 3 exam rooms, a clinical laboratory, and a private office for monitors. A clinical staff member is always available to assist patients with the utmost care, providing a safe and comfortable environment for cutting-edge medical care.
